

# **Omifco point of view on the ECA's late environmental requirement**

# Omifco point of view on the ECA's late environmental requirement

- Ammonia emissions guidelines as per WB 50mg/Nm<sup>3</sup>
- ECAs were informed that total emissions (quantity) rather than concentration should be more important.
- All plants in the region do not have such restrictions.

# **Omifco point of view on the ECA's late environmental requirement**

- Owner and contractor agreed to limit the emissions to the practical lowest values approaching WB Guidelines.
- More productive if ECAs contribution to the process made earlier
- Fortunately most of points of concern to ECAs have been already included in the IEA of MRMEWR.

# Omifco point of view on the ECA's late environmental requirement

- Even though the late arrival of ECAs to the process has time and cost implications to the project, OMIFCO policy is to comply with all reasonable environmental sound management proposals.
